DETAILED ACTION

Specification

1. The disclosure is objected to because of the following informalities: on page 1, above line 1 insert the heading "Background Of The Invention", on page 1, line 7 insert "Discussion of Background Art", on page 3, line 7 insert "Summary Of The Invention", on page 9, line 22 insert "Brief Description Of The Drawings", and on page 11, line 26 insert "Detail Description Of The Preferred Embodiment".

Appropriate correction is required.

Claim Objections

2. Claim 30 is objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. Claim 30 does not further limit claim 1.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claim 30 is rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential steps, such omission amounting to a gap between the steps. See MPEP § 2172.01. The omitted steps are: the relationship between MJT stack and item located in claim 1.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 30-32 are rejected under 35 U.S.C. 102(b) as being anticipated by Daughton et al (6300617).

Regarding claim 30, Daughton et al disclose a method for manufacturing a semiconductor device (semiconductor chip 10) according claim 1, the method comprising providing an MTJ stack (items 15-22 which forms current sensor 24D).

Regarding claim 31, Daughton et al disclose providing the MTJ stack (24D) comprises depositing a free region (ferromagnetic strata 16 and 17) [see col. 12, line 1- col. 13, line 29].

Regarding claim 32, Daughton et al disclose depositing a free region (16 and 17) comprises depositing an artificial anti-ferromagnetic free region comprising a plurality of anti-ferromagnetically coupled ferromagnetic layers [see col. 12, line 1- col. 13, line 29].

Conclusion

7. Claims 1-2, 4-20 are allowed.

8. Claim 33 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 2829

9. The following is a statement of reasons for the indication of allowable subject matter: regarding claim 1, the primary reason for the allowance of the claim is due to amending the claim to include the allowable subject matter of previous claim 3, which states current sensing device comprises at least one TMR device. Since claim 2 and 4-20 depend from claim 1, they also have allowable subject matter.

Regarding claim 33, the primary reason for the allowance of the claim is due to the method comprising modifying the net magnetic moment of the free region so as to make it non-zero.
